Bayesian Theory

Fall, 2021

Instructor: Malay Ghosh
Office: 223 Griffin-Floyd Hall
Phone: 214-3296

Objective:

The objective of the Bayesian Theory course is to provide students with a solid foundation of the theory underlying the Bayesian paradigm. In particular, we will discuss issues related to selection of priors, Bayesian inference both exact and asymptotic, Bayesian model selection and Bayesian nonparametrics. We will also discuss briefly theoretical background for MCMC and Variational Bayes Methods.

Policy:

A student's grade for the spring semester is determined from homework (70%), and an open notes comprehensive final (30%).

Course Outline:

1. Bayesian Inference
2. Large Sample Methods
3. Selection of Priors
4. Hierarchical versus Empirical Bayes
5. MCMC and Variational Bayes
6. Hypothesis Testing and Model Selection
7. Bayesian Nonparametrics
