

STA 3032 (Class Number: 16756)

Engineering Statistics

Fall 2023

MWF 9:35-10:25 a.m. (Room: TUR L007)

The course syllabus is a general plan for the course; deviations announced to the class by the instructor may be necessary.

Instructor: Juhyung Lee

Office: Griffin-Floyd 103B

Office Hours: TBA

Course Description: A survey of the basic concepts in probability and statistics with engineering applications. Topics include probability, discrete and continuous random variables, confidence interval estimation, hypothesis testing, correlation, and regression.

Course Objectives:

- 1. Access, manipulate, and analyze data using statistical software.
- 2. Produce appropriate graphs and descriptive statistics for one and two variables, for both categorical and continuous data.
- 3. Interpret graphs and descriptive statistics for one and two variables.

- 4. Know and apply the basic probability rules, the concepts of expected value and variance for discrete and continuous variables.
- 5. Know and apply the central limit theorem, which is crucial for inference.
- 6. Understand confidence intervals and hypothesis tests.
- 7. Carry out and interpret one-sample and two-sample analyses for means and proportions.
- 8. Carry out and interpret statistical modeling using simple linear regression.

Prerequisite: MAC 2311 ¹.

Course Website: e-Learning. Check course website at least once a day for updates.

Course Material: Lecture notes (will be posted on course website) and in-class notes (will not be posted).

Required Text:

1. Probability & Statistics for Engineers & Scientists (9th ed.) by Walpole, Myers, Myers, and Ye.

Software: R (free statistical software).

Course Communication: Office hours and email.

- Use GatorMail for email; otherwise, you may not hear back from me. I do not check Canvas inbox.
- Put 3032 in the subject line of your email; otherwise, you may not hear back from me. I teach multiple courses and use course numbers to search emails from students.
- Allow me 24 hours to reply to your email.
- Email is not ideal for content questions. Ask them in person (e.g., in class, office hours, etc.).

Assignments and Grading:

• Grades will be based on the following components.

Homework	25%	
Exam 1	25%	in-class, September 27
Exam 2	25%	in-class, November 1
Exam 3	25%	in-class, December 6
Total	100%	

¹Calculus beyond MAC 2311 (e.g., integration by parts) may be needed and discussed. Note that this is a statistics course and calculus is essential part of statistics.

• The following cutoffs will be applied strictly for letter grades. For example, a final score of 67.99 will be a D and cannot be rounded up to a C.

Course Policies:

- Attendance is not mandatory. However, it is your responsibility if you miss any information provided in class.
- You will be given sufficient time for each assignment and no late homework will be accepted. Note that a due date is the last day you can submit your assignment, not the day you should submit your assignment. It is fine if you decide to submit your assignment at a later time on or before the due date, but that means you are taking more risks and it is your responsibility if you fail to meet the deadline. For example, it is your responsibility if you could not submit your assignment due to an outage (e.g., power, Internet, Canvas, etc.) in the due date evening.
- The lowest homework score will be dropped at the end of the semester.
- Once graded and announced, your homework/exam can be reviewed by the grader only if a request is made within one week.
- All exams will be closed-book. However, you may bring one letter-size (8.5 by 11 inches) handwritten cheat sheet (i.e., two pages) to each exam. You may bring your old cheat sheet(s) in addition to the current one. That said, I expect you to be able to solve the problems without referring to cheat sheets, but bring them just in case. To that end, you will need to study at least one hour every day (i.e., seven hours a week); otherwise, you may run out of time in the exam.
- Bring a calculator to each exam. Phones are not allowed.
- A make-up exam can only be given if you are seriously sick or injured, which must be appropriately documented (e.g., doctor's note) and submitted at least 24 hours before the original exam. Excuses such as "waking up sick on the exam day" will not be accepted.
- I reserve the right to approve or reject a make-up request and you cannot be approved more than one make-up exam. If approved, you must visit me in person within one week of the original exam to take the make-up exam. You are responsible for scheduling.
- A make-up exam will be different from the original exam (e.g., written questions rather than multiple-choice or short-answer, possibly harder, etc.) and the score is not eligible for an adjustment/curve.

Academic Integrity:

You may discuss homework with each other, but you must write up your solutions independently. You may never discuss exams with each other. You are held accountable to the UF Student Honor and Conduct Code.

Students with Disabilities:

Students requesting accommodation for disabilities must first register with the Disability Resource Center (DRC). The DRC will provide documentation to the students who must then provide this documentation to the instructor when requesting information. You must submit this documentation prior to submitting any assignments for which you are requesting accommodation.

Course Evaluations:

Students are expected to provide feedback on the quality of instruction in this course by completing course evaluations online via GatorEvals. Guidance on how to give feedback in a professional and respectful manner is available at https://gatorevals.aa.ufl.edu/students/. Students will be notified when the evaluation period opens, and can complete evaluations through the email they receive from GatorEvals, in their Canvas course menu under GatorEvals, or via https://ufl.bluera.com/ufl/. Summaries of course evaluation results are available to students at https://gatorevals.aa.ufl.edu/public-results/.

Tentative Course Outline

Week	Content	Text		
1	Introduction	1.1-1.6		
2	Sample Space, Events, and Probability	2.1-2.2, 2.4-2.5		
3	Conditional Probability and Independence	2.6-2.7		
4	Random Variables and Probability Distributions	3.1-3.4, 4.1-4.3		
5	Some Discrete Probability Distributions	5.1-5.2, 5.4		
Exam 1				
6	Some Continuous Probability Distributions	6.1-6.4, 6.7		
7	Sampling Distributions and the Central Limit Theorem	8.3-8.7		
8	Inference on Population Mean: Confidence Intervals	9.1-9.5		
9	Inference on Population Mean: Hypothesis Tests	10.1-10.4		
10	Inference on Population Proportion			
10	Inference on Population Variance	9.12, 10.10		
Exam 2				
11	Inference on Two Population Means: Confidence Intervals	9.8-9.9		
11	Inference on Two Population Means: Hypothesis Tests	10.5		
12	Inference on Two Population Proportions	9.11, 10.9		
Inference on Two Population Variances		9.13, 10.10		
13	Contingency Tables	10.11-10.13		
14-15	Simple Linear Regression	11.1-11.6		
	Exam 3
